Choose A Ride
Order Confirmation
Ride Confirmed
Continue Charging the Account
bolt rides carding method completed, congratulations.
>>>
Use this bolt carding method to pay for rides in your app. You can simply swap your default payment method for a non vbvcard. Any purchase will come from the card and you can save your funds for other uses. The carding process is very easy, it's just like using the app normally only this time you will use another person's credit card for payments Use this method together with my other hotel and bookings to also pay for hotels withnon vbv cards.
Never pay for rides again using your card. Just link a non vbv card to the account and make your future payments from the card. The card will last for several weeks before being blown out and you can add another one contact me if you are looking fore the solid nonvbv bolt card @DeRafay Rafay Baloch

BOLT RIDES CARDING METHOD – 2026
>>>
Requirements:
Phone – You can use android or iPhone to download the app
Proxies – You can use proxies in your pc if you have them
Vpn – Use vpn in your phone or computer(recommended)
Phone number – Phone number to send sms to
Buy NonVbv CC from @DeRafay
Fullz – To avoid verification, use Fullz with all personal info

For easy carding, always use a card with all fullz info as it saves you time to get background info and speed up verification process

Bolt.eu

Bolt mobile site

>>
STEPS
buy fullz from me for a high success Rate as i listed above

Create a new Bolt Account
Visit m.bolt.com – the mobile version of the website or if you are using phone download the app. You will need a phone number to create the account. Make sure the phone number is valid and you can receive sms with it.

Next you will receive sms code to verify your number. Enter the 4-digit code you received to your phone number. Create a password to finalize the account creation

Account Summary
Depending on the version of the app you are using, fill the required detail and create password as they request
You should have an account summary like these after completing

Add Credit Card
Click on payment and let's add our credit card

Cards Summary
After add card button, if it is a live card with balance, it will be added. You will get a summary of the cards added and any other payment method available in your account. You should have one if you already added the card. I added several in my account

Now this means we have an account with a working linked payment option. We can now pay for rides as we want

Choose A Ride
Now choose a ride in which you want to attend to. You can choose any ride as you want. The rides really don't charge much. Choose the right comfort for your as you are not using your card hence no worry

Depending on your comfort and luggage, choose the correct car you want. You can choose the best you find as they don't cost much and your card should have a huge balance. So make yourself as comfortable as you can

Order Confirmation
Now if everything is as you want, you can confirm the order and request the cab. Hit the Confirm order button

Give the app time to request a new ride. Since your card is successfully linked and working. This should work out fine and you should get a confirmation and information of your ride.

Ride Confirmed
Now your ride will be confirmed and you should just wait the indicated time for your cab to find you

Continue Charging the Account
Use the card to pay for future rides as you want. The card should take several months in your app before it gets used up. This should save you a lot.
